

Enterprise Agility with Business Process Improvement and Contextual Analytics facilitating quick, efficient, and effective project management

**KANBAN BOARD | SAFe 4.0 FRAMEWORK | SCRUM METHODOLOGY | IN-HOUSE INTEGRATION | DEPLOYMENT CHOICES**

EyeAgile is an Agile Project Management solution that helps to plan, organize, track, and deliver the project on time meeting the quality standards and within the budget. EyeAgile architecture gives enterprise-level transparency and visibility across all phases of project development, deployment, integration, and delivery. It is a simple, visual, and collaborative platform to increase efficiency and drive productivity.

# WHY CHOOSE US?

## PROJECT PROGRESS AT A GLANCE

EyeAgile gives a comprehensive view of the project status at a glance, including the user stories that need to be done, team member progress on a project, backlogs, defects, detailed view of a task, discussion facility, user acceptance testing and completion of tasks in percentage in the Kanban Board.

## ADVANCE ANALYTICS

Provides the analytics of all processes in an efficient manner, which ultimately delivers actionable intelligence. Analytics provides quick ways for data exploration and discovery through advanced statistics and analytics.

## ORGANIZE PROJECT TO GET WORK DONE

EyeAgile projects can be created in a better way to run the business ensuring the quality is met. It offers support to JIRA and RallyDev file formats, performs open integration, and scalable to support all types of requirements.

## MOBILE SUPPORT

EyeAgile Mobile App for agile project management puts the power of management in the mobile device. It features intuitive interface to allow the users track the status and progress of the project while on the go. Mobile project management improves team communication, easy access to tasks, drive innovation and coordinate in managing complex projects.

## BETTER COLLABORATION WITH TEAM

Facilitates clarity on the objectives and progress without long status meetings and email threads. Task assignment and categorization have become easy by using the tags. EyeAgile helps businesses respond quickly and ensure interactive collaboration to achieve better result.

# PLATFORM MODULES

- **Actionable Meeting** – Set-up and configure an agreed agenda that enables in monitoring and tracking multiple meetings in accordance with quality standards
- **Change Management**– A structured approach to plan, schedule, implement and track changes that need to be completed in a project
- **Collaboration**– Generate new ideas, increase productivity, reduce project execution time, and improve employee relations
- **Deployment, Scalability & Open Integration** – Deployment support, meet the functional and non-functional requirements and incorporate JIRA and Rally Dev file formats
- **Document Management**– A centralized repository to easily organize and work on critical documents of projects and maintaining the version
- **Email Interfacing and Notifications** – Better collaboration with the team and notification to alert immediately to the team about new tasks
- **Epic**– Develop and implement projects in well-defined stages to assure success for current technologies and business goals
- **Idea management**– Manages customer’s feedback, ideas, and suggestion to utilize for innovation
- **Product Roadmap**– Represents six months program increment (PI) milestone, a roadmap includes committed confidence and visibility into deliverables of current PI and forecast with medium confidence for next PI or two
- **Program and Portfolio management**– Assess organization’s processes, interpret key stakeholders’ requirements and establish a comprehensive plan
- **Project Management**– Manage project scope, track and organize the tasks, and manage the resources to enhance the team collaboration
- **Quality Management** – Quality control, process automation, and reporting for visibility to achieve success in a project lifecycle
- **Reporting & Analytics** – Dynamic visualization of the tasks and project progress and advance analytics for taking business decision.
- **Requirement Management** - Effectively plan, orchestrate, and track requirements for complex software’s, products, and embedded systems
- **SAFe 4.0** - SAFe (Scaled Agile Framework) assist leaders, managers, and executives in applying SAFe for enterprise level Lean-Agile software and system development
- **Security** - Integrates security to ensure every security risk is identified, assessed, and managed effectively.
- **Strategic themes** - Communication protocol between the enterprise and its solution portfolios, driving innovation through a structured and collaborative strategic planning process
- **Team Management** – Track the teamwork and manage the project progress to maximize team’s productivity, communication, and customer experience
- **Timesheet Management** - Assess, estimate and observe how team is closely engaged in various projects and time taken in completion of a task
- **Watchlist** – Track and monitor information to allow users remain up-to-date and increase pragmatic intelligence
- **User Management** – Manage users and roles in a project while assigning roles to each user and given different permission.
- **Value Stream** – Delivers substantial benefits to the organization, including faster learning, shorter time to market, higher quality, higher productivity and solutions.
- **Budget Management** - Evaluate, optimize, and control all aspects of cost management in a project to deliver the expected project goals
- **Kanban Board** - Visualize, control and optimize workflow and collaborate in real-time with the entire team
- **Release Management** - Manage, plan, schedule and control all stages of a project development including testing and deploying software releases
- **Resource Management** - Plan, schedule, and allocate resources required for initiating and executing a project and its phases.
- **Workflow Management** – Manage team workflow and recurring processes with the workflow automation for effective collaboration, communication, and workflow management

# BUSINESS BENEFITS

EyeAgile is an agile project management platform that brings all the aspects of a software development lifecycle together in an integrated fashion. The platform provides real-time project intelligence thereby enabling multi-site team collaboration.

- Delivers good product quality and provides higher customer satisfaction
- Brings a new level of transparency and keeps everything in a single place
- Boosts productivity and reduces operational costs
- Ensures visibility across the project lifecycle for improved decision-making
- Maximizes transparency and traceability of projects as well as teams
- Gain insights into progress to accelerate delivery and manage changing priorities
- Reduces time to market and lowers the cost of rework
- Dramatically decreases the need to rework tasks and lose precious work time
- Makes agile easier for the teams to improve adoption and increase enterprise agility
