

## DRIVING AUTOMATION AND USHERING BUSINESSES INTO THE DIGITALLY TRANSFORMED ERA

**DATA DRIVEN | CUSTOMIZABLE | LOWER COST OF OWNERSHIP | MOBILITY | INCREASES PROFITABILITY**

SiteFORGE aims to provide data quality management with automated data entry and report generation along with the mobility in the field operations. SiteFORGE is engineered with an innovative approach in streamlining processes and ensuring data integrity.

# WHY CHOOSE US?

## WORKFLOW ORCHESTRATION

SiteFORGE is engineered with workflow orchestration enforces accountability, streamlines communication, and minimizes costs and removes manual errors. The core business objectives are in accordance with regulatory mechanisms.

## REAL TIME PROJECT INTELLIGENCE

SiteFORGE allows visibility of data, status of tasks and information enabling end to end transparency in the projects. It ensures there is role-based access of information and improves the visibility into project schedules.

## NOW MOBILITY PLATFORM

SiteFORGE's end-to-end enterprise mobility solutions address all the critical enterprise requirements. NOW provides a rich & interactive interface to manage various tasks and issues managed via mobile/tablet.

## AUTOMATED BUSINESS RULE VALIDATION

SiteFORGE aims at identifying project defects, errors and risks before a process or software is deployed validating that the business operates on clean, accurate and useful data and information.

## IMPROVED FORECASTING

SiteFORGE ensures accurate forecasting through different stages. SiteFORGE is engineered with multiple features wherein forecasting takes place which minimizes risks and facilitates in improving the efficiency of the business.

## ADVANCED INTEGRATION CAPABILITIES

SiteFORGE empowers the businesses to seamlessly integrate the data and business processes. Integration with open API's enables the team and the business to update workflows so that it can be done without wastage of time and productivity is enhanced.

# PLATFORM MODULES

SiteFORGE is engineered with productivity benefits, it automates various processes comprising of site planning, analysis, installation, commissioning and acceptance. The platform provides real-time intelligence by assisting executives and site engineers to remain abreast with the project process and associated information.

- Workflow platform and automation with analytics focuses on data integration
- Dashboard library and ability for users to drag and drop widgets
- Event generation for workflow automation
- Scalable solution with consistent high performance
- Load balancing and transparent failovers
- Supports integration with third party solutions
- Structured and unstructured data processing while managing static and dynamic data
- High quality data visualization output
- High availability via multi-instance support and clustering
- Mobility based automation for off-site processes
- User management with the ability to configure various user types
- Security and auditing capabilities

# BUSINESS BENEFITS

- Unified view abstracting all of underlying integrations
- Single source of truth for site planning, development, rollout, installation and commissioning
- Provide project management support with the planning of site-related tasks
- Regulatory compliance index tracking
- Horizontal integration across all platforms
- Mobile application for data collection and validation
- Centralized data governance
